Q1. Food Delivery Billing System (Multiple Inheritance using Two Interfaces)

Score: 10.00 TC: 3/3 passed

CODE

```
import java.util.Scanner;
interface DeliveryCharge
{
    public void calculateDeliveryCharge();
}
interface CouponDiscount
{
    public void calculateDiscount();
}
public class FoodOrder implements DeliveryCharge, CouponDiscount
{
    public double delivery charge;
    public String coupon code;
    public double discount;
    public double food cost;
    public double final bill;
    public void calculateDeliveryCharge()
    {
        if(food_cost>=500)
        {
            delivery charge=0;
        }
        else
        {
            delivery_charge=50;
        }
    }
    public void calculateDiscount()
    {
        if(coupon_code.equals("SAVE10"))
        {
            discount=food cost*0.1;
        }
        else
        {
            discount=0;
        }
    }
    public void calculateFinalBill()
    {
        final_bill=food_cost+delivery_charge-discount;
    }
    public void display()
    {
        System.out.println("Food Cost : " + food_cost);
        System.out.println("Delivery Charge : " + delivery charge);
        System.out.println("Discount : " + discount);
        System.out.println("Final Bill : " + final bill);
    }
    public static void main(String[] args)
    {
        Scanner in=new Scanner(System.in);
        FoodOrder f=new FoodOrder();
        f.food_cost=in.nextDouble();
        in.nextLine();
        f.coupon_code=in.nextLine();
        f.calculateDeliveryCharge();
        f.calculateDiscount();
        f.calculateFinalBill();
        f.display();
        in.close();
    }
}
```

INPUT

600
SAVE10

OUTPUT

Food Cost : 600.0
Delivery Charge : 0.0
Discount : 60.0
Final Bill : 540.0

Q2. Hotel Billing System (Multiple Inheritance using One Class and One Interface)

Score: 10.00 TC: 3/3 passed

CODE

```
import java.util.Scanner;
class Main
{
    public static void main(String[]args){
        Scanner in=new Scanner(System.in);
        HotelBill h=new HotelBill();
        h.Room_number=in.nextInt();
        in.nextLine();
        h.Name=in.nextLine();
        h.Rent=in.nextDouble();
        h.calculateServiceCharge();
        h.finalbill();
        h.display();
    }
}
class Room
{
    public int Room_number;
    public String Name;
    public double Rent;
}
interface Service_charge
{
    public double calculateServiceCharge();
}
class HotelBill extends Room implements Service_charge
{
    public double final_bill;
    public double ServiceCharge;
    public double calculateServiceCharge()
    {
        if(Rent >= 5000)
        {
            ServiceCharge = Rent * 0.12;
        }
        else
        {
            ServiceCharge = Rent * 0.08;
        }
        return ServiceCharge;
    }
    public void finalbill()
    {
        final_bill=ServiceCharge+Rent;
    }
    public void display()
    {
        System.out.println("Room Number : "+Room_number);
        System.out.println("Guest Name : "+Name);
        System.out.println("Room Rent : "+Rent);
        System.out.println("Service Charge : "+ServiceCharge);
        System.out.println("Final Bill : "+final_bill);
    }
}
```

INPUT

```
205
Anil
6000
```

OUTPUT

```
Room Number : 205
Guest Name : Anil

Room Rent : 6000.0
Service Charge : 720.0
Final Bill : 6720.0
```
